## Series Wing Top Protectors

1. Place wing top protectors upon your wings, noting any mirrors, bonnet hold downs, antennae, etc. that would keep the protectors from lying flat on the wing tops. Remove these items if any.
2. Place the wing top protectors in place so they match the contour of the front top part of the wing. **\*\*NOTE:** They will be back from the seam *approximately 1/2" to 3/4"*. The long side of the protector should be aligned evenly with the outer wing panel/wing top seam. This should also be approximately 3/4".
3. Mark the locations of the 8 mounting holes (per protector) with the marking pencil. **\*\*NOTE:** Also mark any other holes that are needed for your vehicle at this time. Do so from the back side so you can drill the protector to meet your added holes. **\*\*SPECIAL NOTE:** Any altered wing top protectors returned to Rovers North will not be credited.
4. With a small punch and hammer center punch the pencil marks. This will prevent the drill from wandering.
5. Drill each marked mounting hole with a 1/4" drill. **\*\*NOTE:** Be careful of any wiring, etc. they may become entangled in the drill. They may be under the wing top.
6. Place wing top protectors back in place with the foam backing strips (cut and place strips to desired lengths and locations for each side). Using the small center punch, locate and punch through the 8 bolt holes then bolt down the wing top. Each hole takes 1 bolt, 1 nut, and 1 washer.
7. (If needed) Re-attach any other items that you need too.

### Package Contains:

1/4" x 3/4" stainless steel flathead screws	(18)
1/4" stainless steel nuts	(18)
1/4" stainless steel washers	(18)
