Fitting Instructions for Sender Kit for Fuel Gauge

- 1) To determine the correct level of the float arm, measure the old tank Unit Arm Radius (see diagram) before discarding, or measure the depth of tank then consult the table below.
- 2) Allowing as much overlap as possible, place the two clips, (see diagram) in the respective positions on the float arm. Trim off excessive wire and solder. **IMPORTANT: Remove float while soldering to avoid damage**
- 3) Connect the existing cable to the T Terminal on the tank unit. W Connectors will then be connected to the tank unit to warning light, if fitted. If grounding to earth is required, use the center terminal on the tank unit.
