Series IIA Manual Windscreen Washer Kit Fitting Instructions

1. Mount the washer bottle on the inside of the left wing. This should be just opposite of the fan belt.
2. Mount the pressure pump unit in the dash using a 5/8" hole, location of the pump is optional to users needs.
3. Measure across the fire wall from the edge 19". Locate the narrow strip between the vent and the windscreen bottom seal. Drill a 3/8" hole at the 19" distance through both sections of the firewall on both left and right hand sides, install the washer jets.
4. Now run hose from the pump up to the tee with the check valve in between, then from the tee to each jet. Then run the hose from the pump back to the bottle passing through the wiring grommet across the bulkhead, down the wing and into the bottle with the foot valve at the bottom end of the hose. Connect feed from the bottle to connection marked "S" and jets to connection marked "J". Fill the bottle with windscreen fluid and the job is complete.
